

CAMARA
THE TELCO GLOBAL API ALLIANCE

Presentation

11.09.2024

Content of the CAMARA presentation

- CAMARA Mission
- CAMARA Motivation – Key problems we try to solve
- CAMARA Scope
- Collaboration with Open Gateway and TM Forum, API Distribution Options
- What is different now in comparison to former API exposure trials?
- History, Logos & Current Figures – Where we started and where we are now
- Current Meta Release, CAMARA APIs, Showcases, Public Launch Status
- 5G network capabilities, Potential Business Use Cases
- Benefit for developers to use CAMARA APIs & Getting Started
- Benefit for developers to work in CAMARA & Joining CAMARA as Developer
- Benefit for operators to implement CAMARA APIs in their networks & Getting Started
- Benefit for operators to work in CAMARA & Getting Started
- Where are we going next, Contacts

APIs enabling seamless access to
Telco network capabilities

Telco network capabilities exposed through APIs provide a large benefit for customers. By simplifying telco network complexity with APIs and making the APIs available across telco networks and countries, CAMARA enables easy and seamless access.

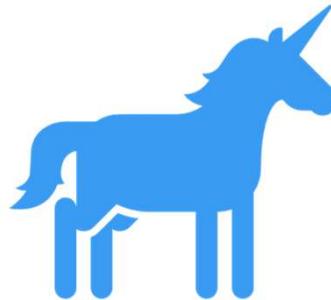

CAMARA mission

What is the CAMARA Project? Key problems we try to solve

CAMARA
THE TELCO GLOBAL API ALLIANCE

Scale

Developers dream of being the next unicorn... If apps, products, or services are built on our APIs they want them in all relevant markets and networks globally.

Consistency

Multi-nationals want consistency across all markets they operate in... they do not want APIs that only work in a single network in a single country. They do not want to try and build for the differences of each network.

Simplicity

Telco networks are complex, and every network is different.... Developers want simple, intent-based APIs.

Accessibility

We go to the developers where they are so the project is open sourced in the Linux Foundation. Allowing API users to work directly with CSPs creating the service.

Demand driven

We develop the APIs and design it in the way our customers need it. The demand is collected from organizations like GSMA OPAG but also from customers directly.

Key problems we try to solve

Consistency Benefit

CAMARA
THE TELCO GLOBAL API ALLIANCE

Availability across telco networks and countries is necessary:

- To ensure seamless customer experience
- To accelerate technology development and commercial adoption (minimize implementation effort)
- To accelerate education and promotion
- To support application portability

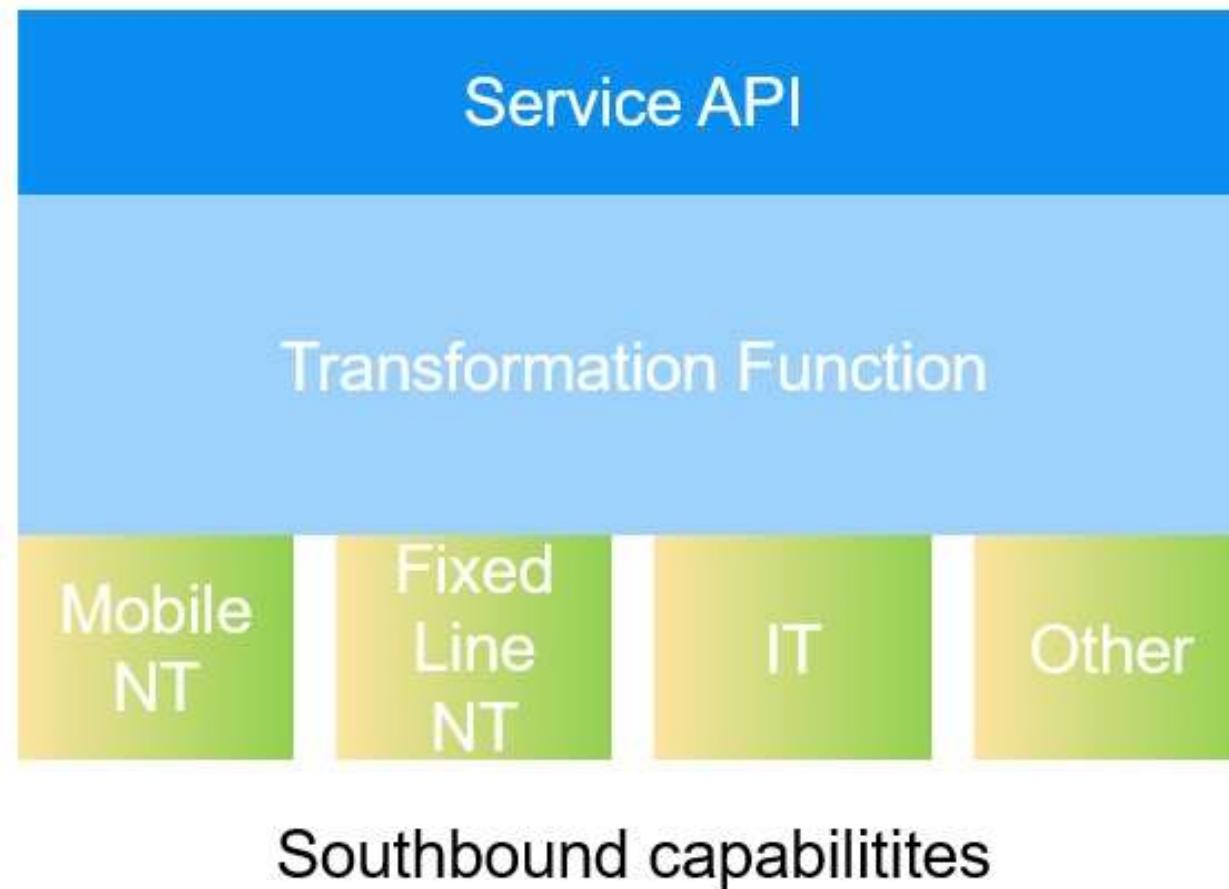

Key problems we try to solve

Simplicity Benefit

Abstraction from Network APIs to Service APIs is necessary:

- To simplify telco complexity making APIs easy to consume for customers with no telco expertise (user-friendly APIs)
- To satisfy data privacy and regulatory requirements
- To facilitate application to network integration

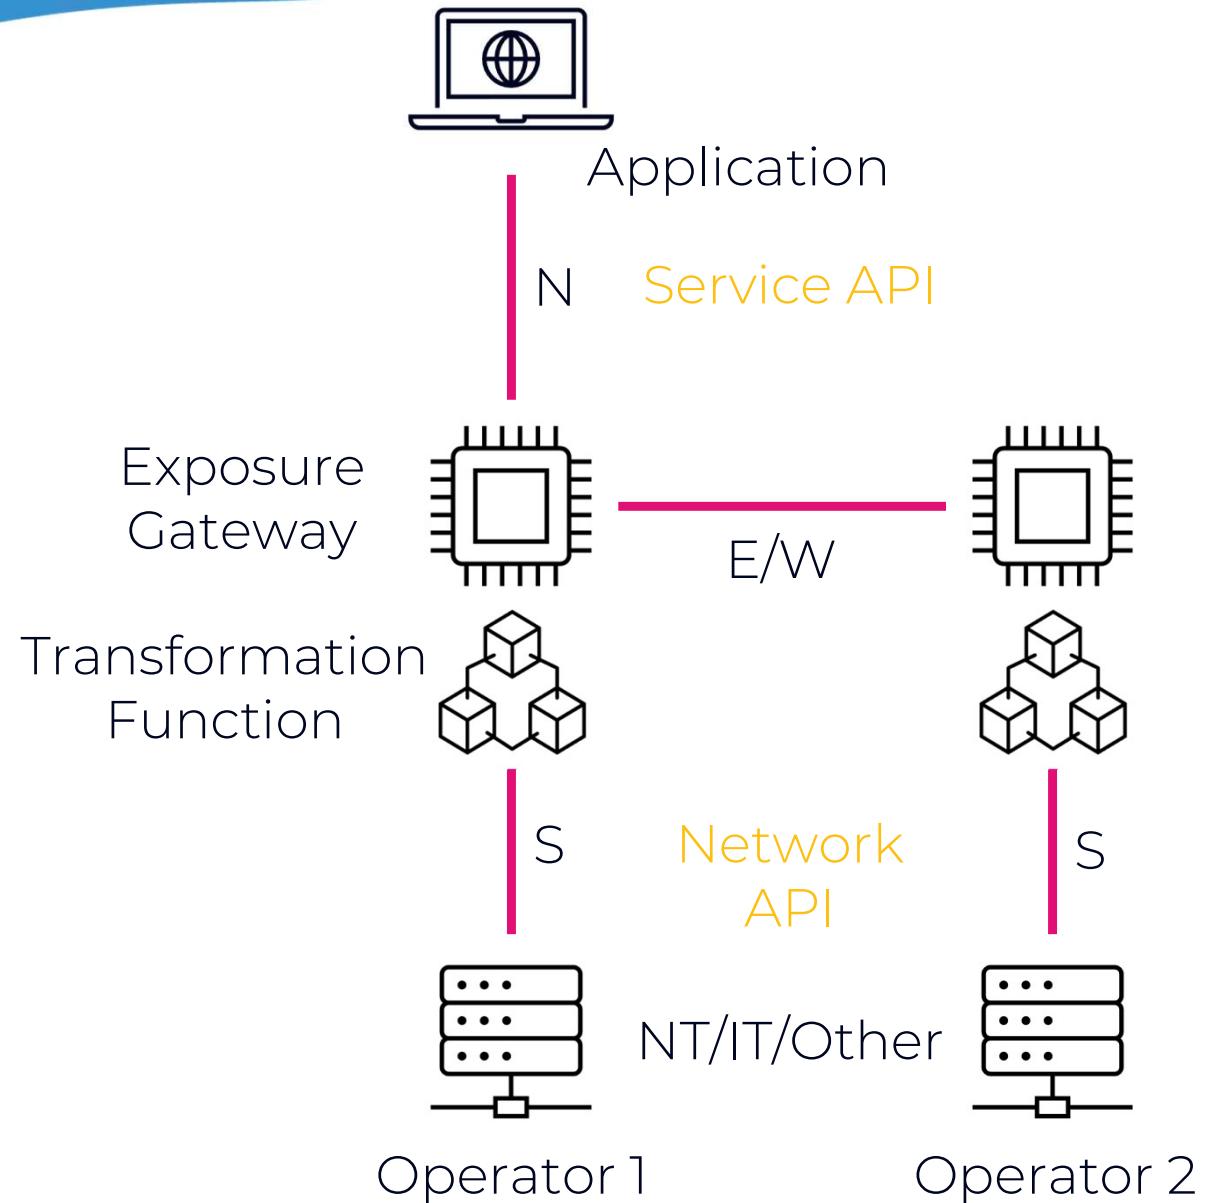

CAMARA is an open source project within Linux Foundation to define, develop and test the APIs. CAMARA works in close collaboration with the GSMA Operator Platform Group to align API requirements and publish API definitions and APIs. Harmonization of APIs is achieved through fast and agile created working code with developer-friendly documentation. API definitions and reference implementations are free to use (Apache2.0 license).

CAMARA Scope

From functional perspective the scope is limited to **telco APIs**, that means APIs in the domain of telco mobile networks, telco fixed line networks, telco edge cloud, etc. or supporting these.

Thereby the focus is on the **northbound interface** (between telco operator and aggregator or capability consumer). East-/westbound interface APIs are out of scope for CAMARA.

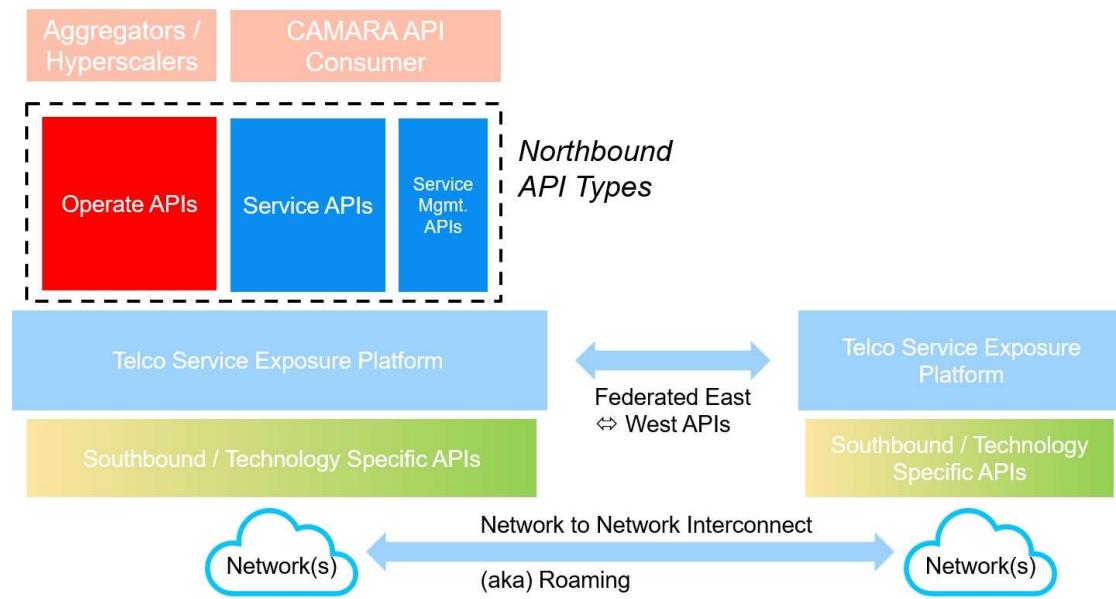

CAMARA Scope

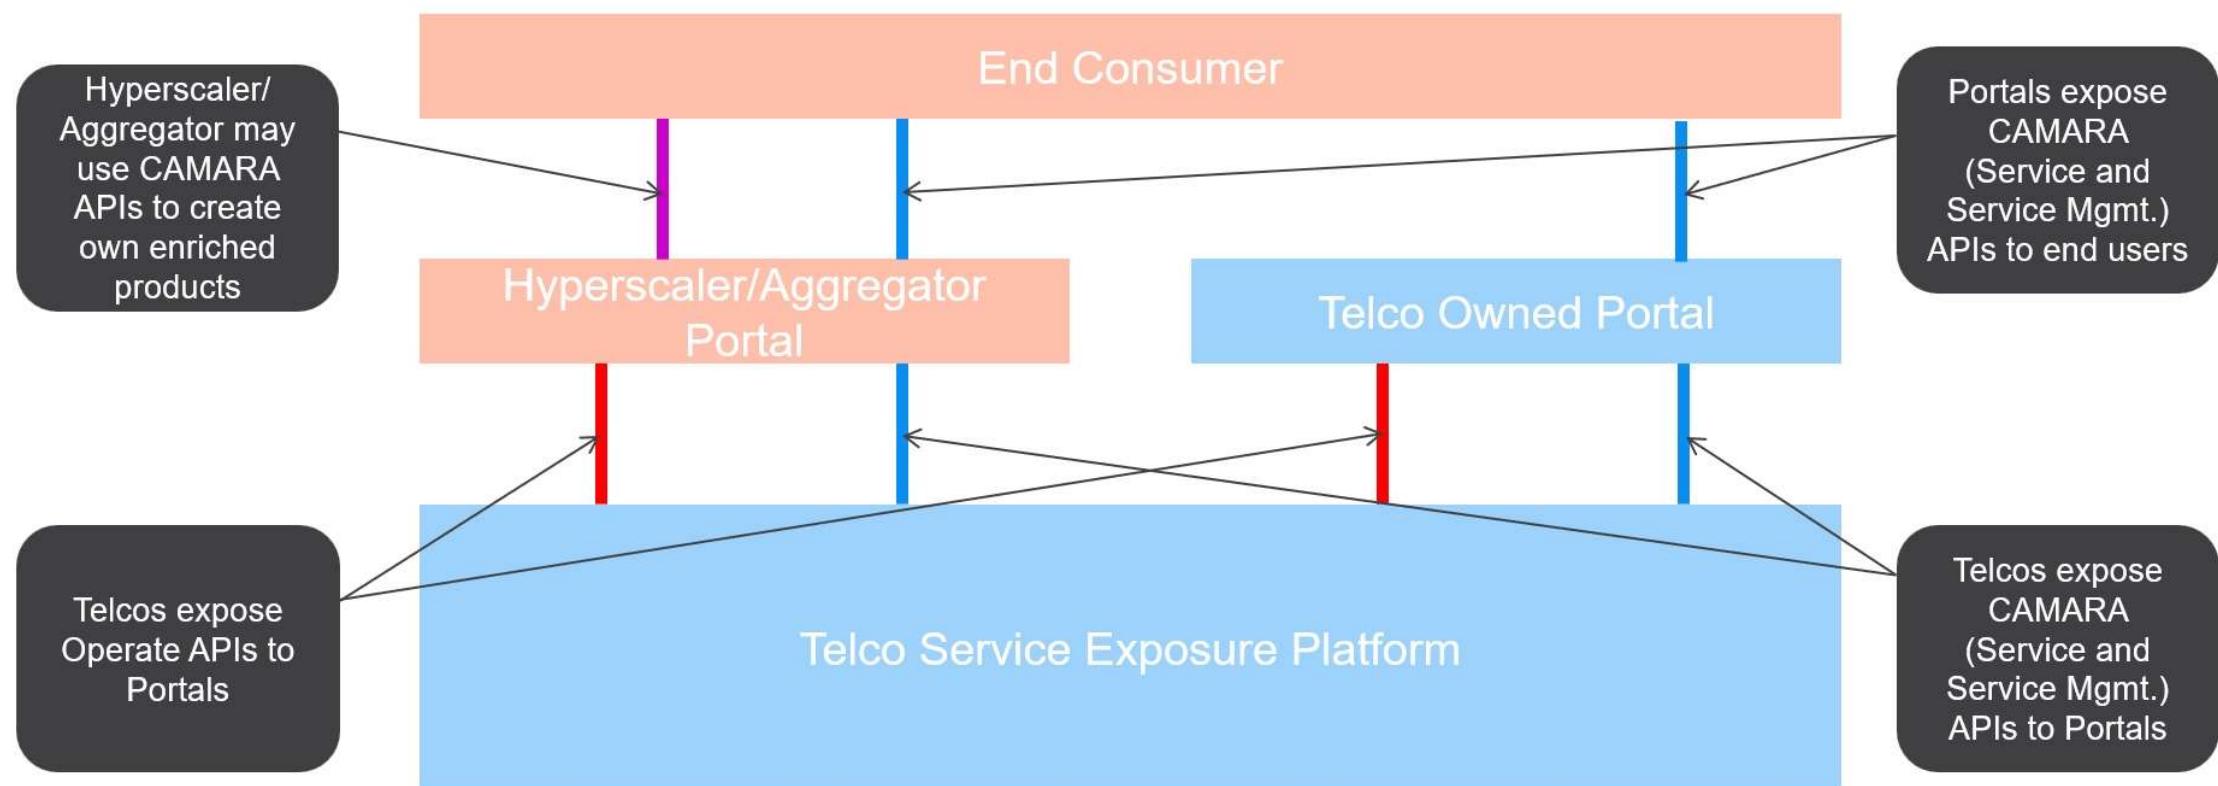

We differentiate between 3 types of Northbound APIs:

- **Service APIs:** APIs intended for end consumers and integrated by developers to invoke a certain telco capability.
- **Service Management APIs:** APIs intended for end consumers to manage or get data about offered Service APIs in application runtime, e.g., check service availability or performance information.
- Operate APIs: Operational and maintenance APIs provided by a telco to channel partners for the purpose of service fulfillment and assurance to their [channel partner] customers. This may include service provisioning for a mobile user, technical API performance monitoring, fault ticketing, information exchange such as product catalog, pricing, settlement, etc.

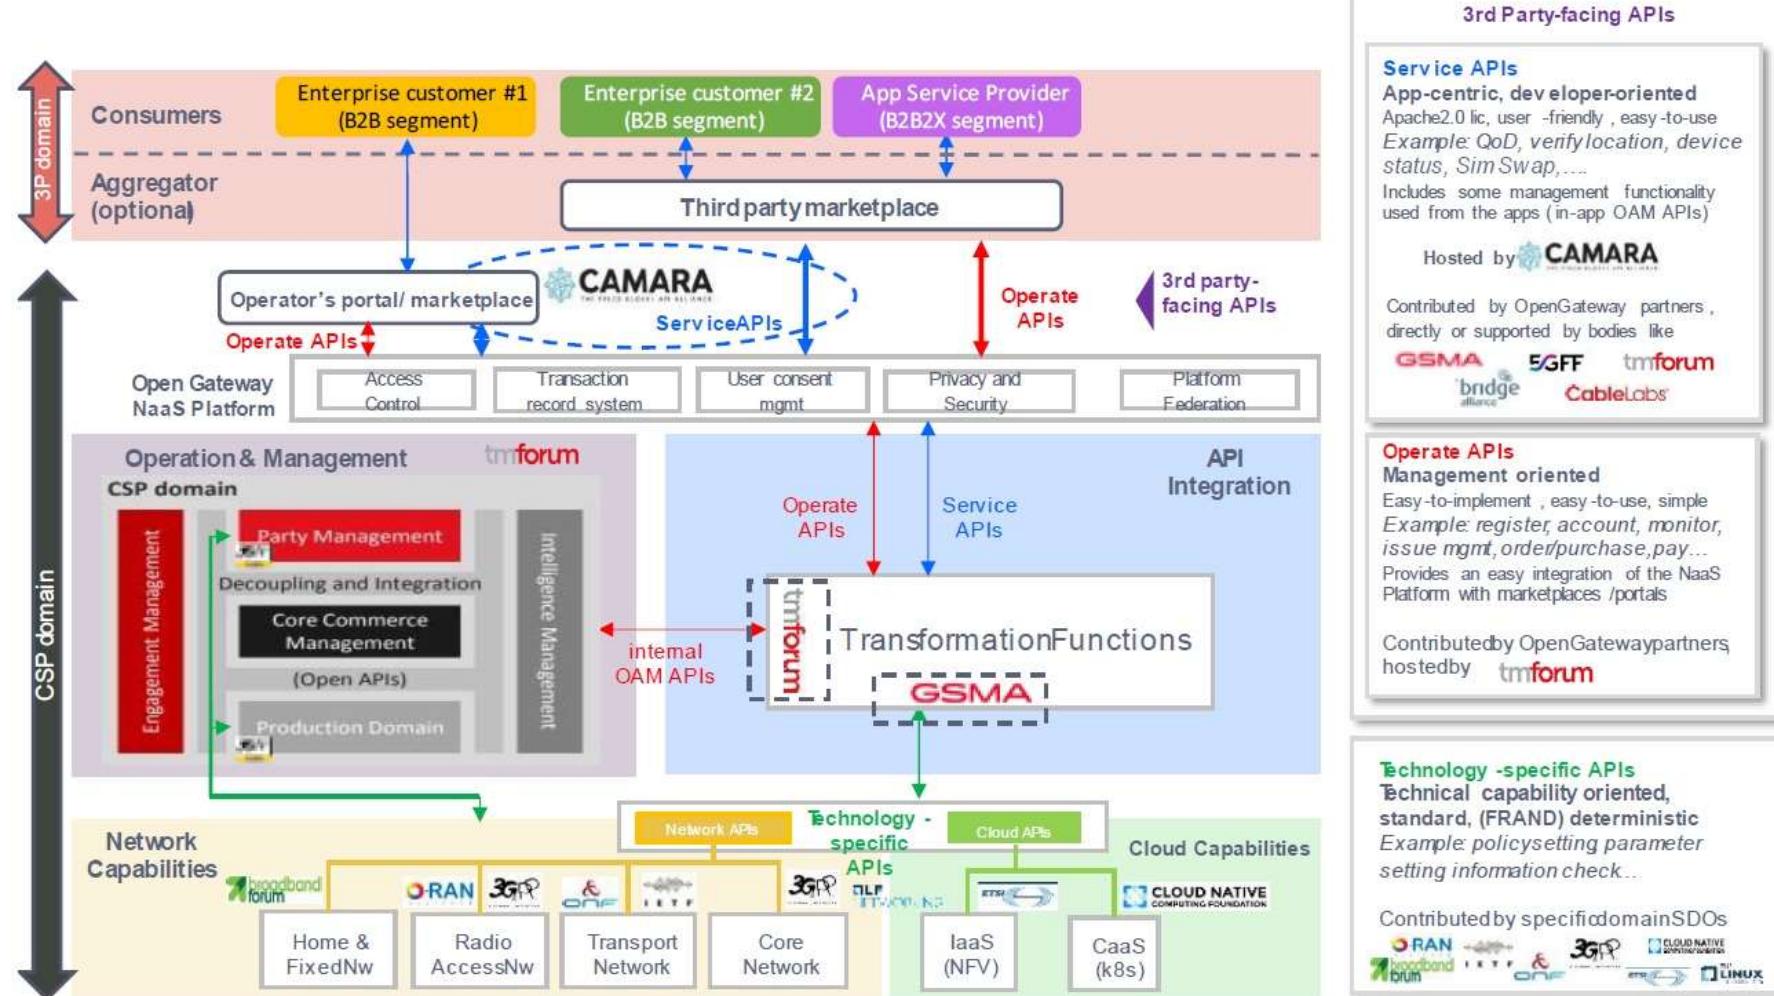

Service APIs and Service Management APIs are in scope of CAMARA. Operate APIs are out of scope of CAMARA (these are already covered by other SDOs = Standards Development Organizations like TM Forum).

CAMARA – Scope / Collaboration with Open Gateway and TM Forum

Hyperscalers and aggregators have the possibility to create own enriched products based on the CAMARA APIs and expose that in addition to the CAMARA APIs.

CAMARA – Scope / Collaboration with Open Gateway and TM Forum

CAMARA project defines CAMARA APIs.

TMForum develops the Operate APIs.

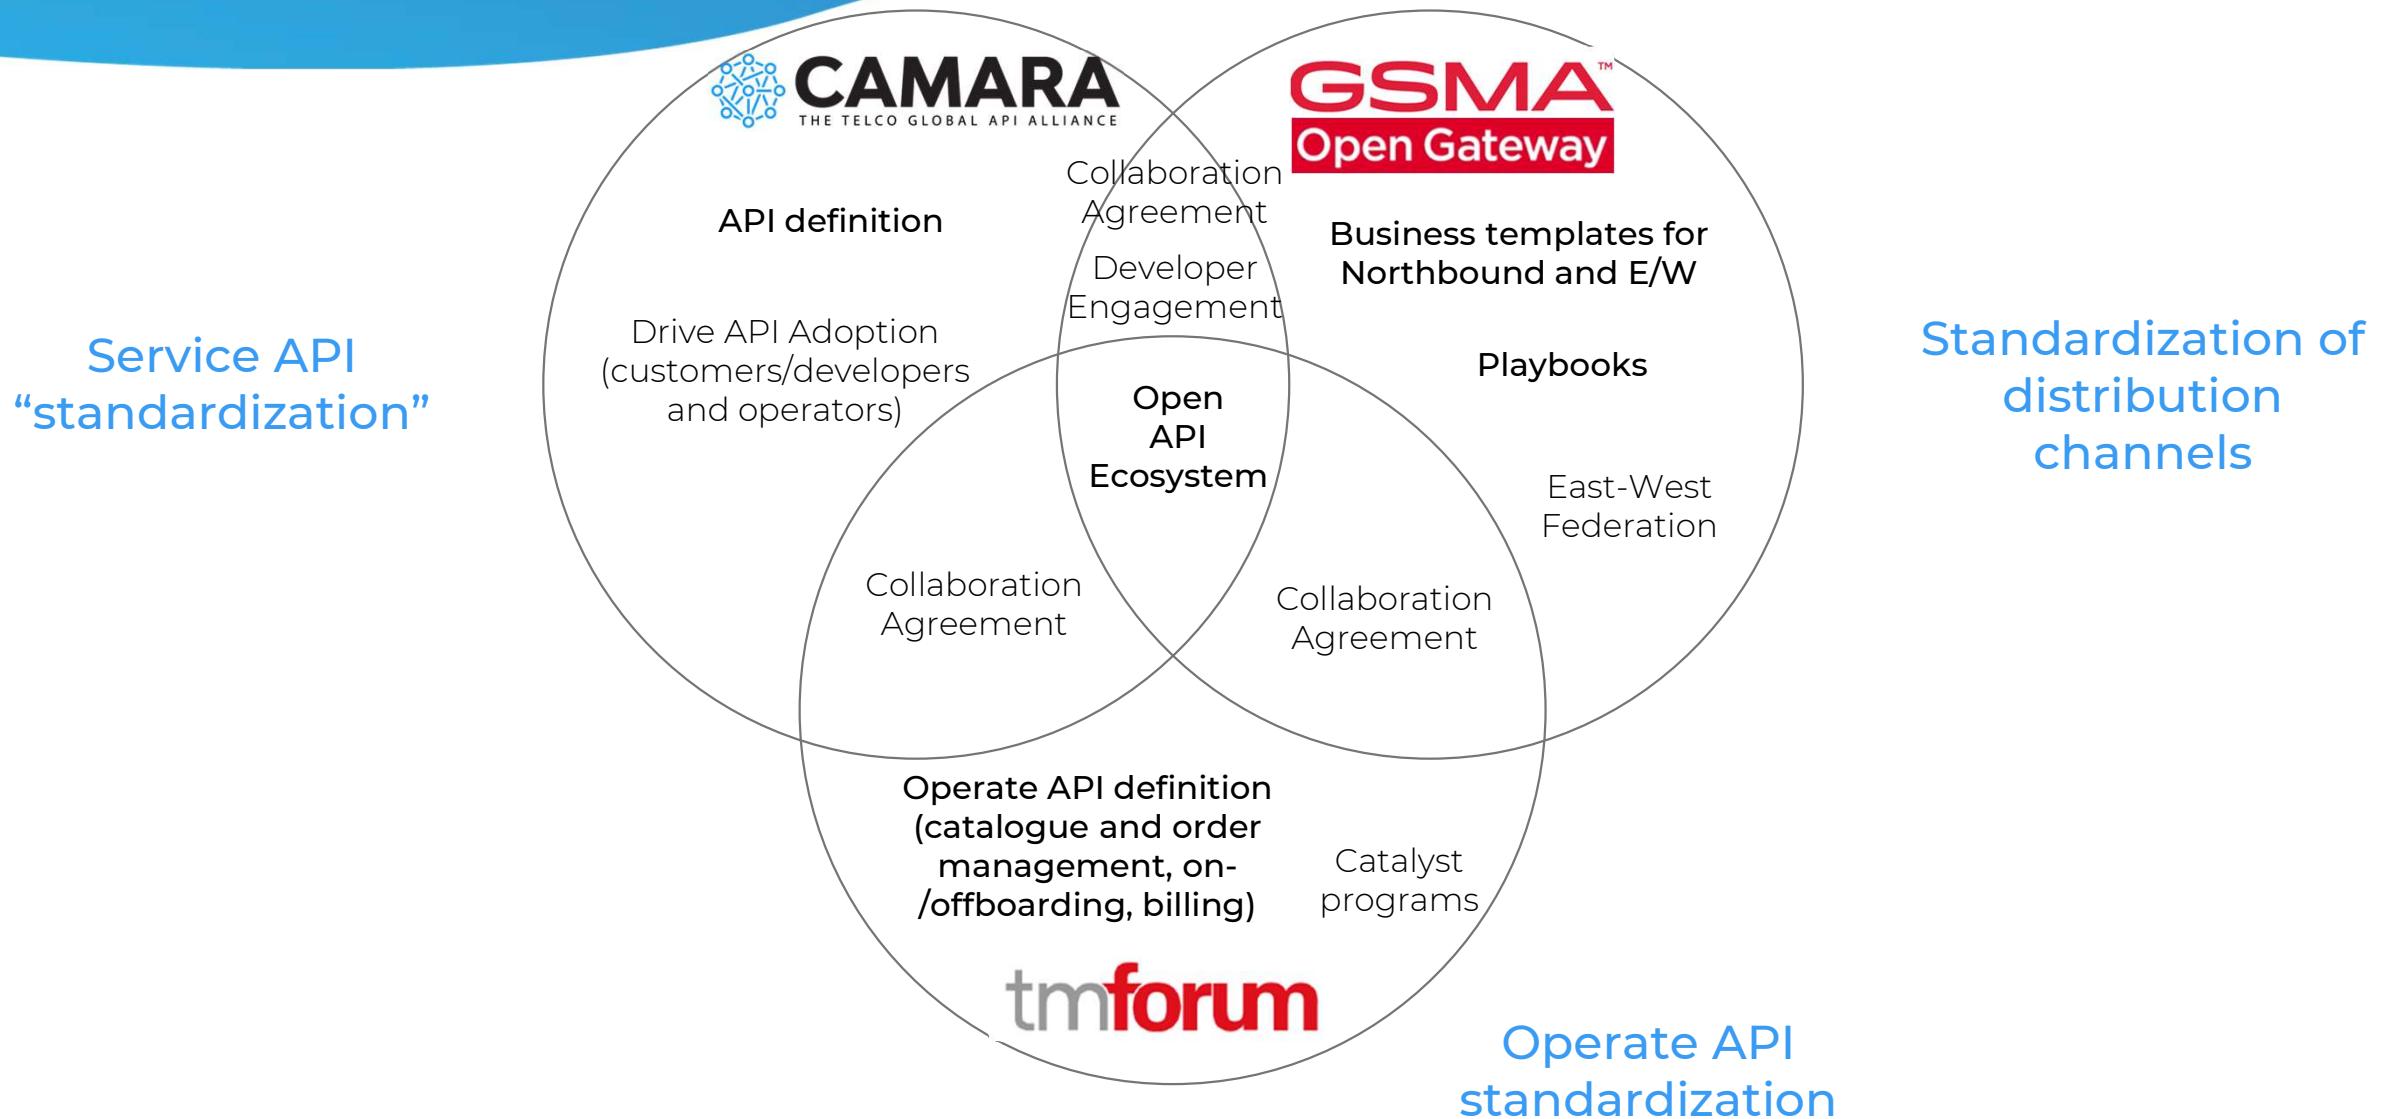

Several SDOs cover the different technology domains that provide the telco capabilities.

More details can be found in the whitepaper “The Ecosystem for Open Gateway NaaS API Development” (jointly published by GSMA, CAMARA, Linux Foundation and TMForum) available [here](#).

CAMARA – Scope / Collaboration with Open Gateway and TM Forum

CAMARA
THE TELCO GLOBAL API ALLIANCE

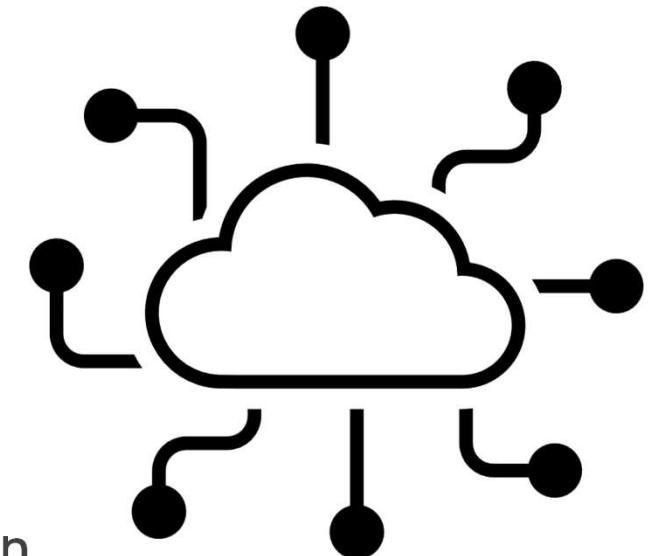

The scope of the CAMARA Project is:

- **Collect API requirements** from GSMA Operator Platform Group and other sources
- **Define Service APIs and Service Management APIs**
- Create test plans / cases / tools from an API consumer perspective
- **Develop and test Service APIs and Service Management APIs**
- Create developer friendly **documentation**

The following deliverables are provided by the CAMARA Project:

- **Service API and Service Management API definitions and documentation**
- Optionally Service API and Service Management API code and
- Test plans, cases and tools for the APIs all contained in deployment packages.

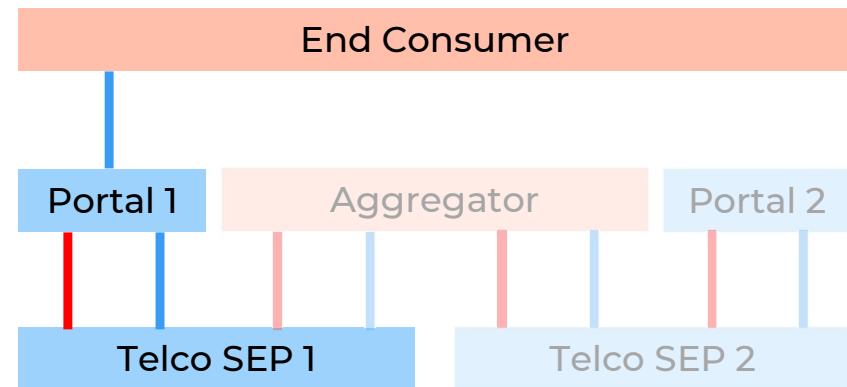

Project resources can be found in the **GitHub repository**: <https://github.com/camaraproject>.

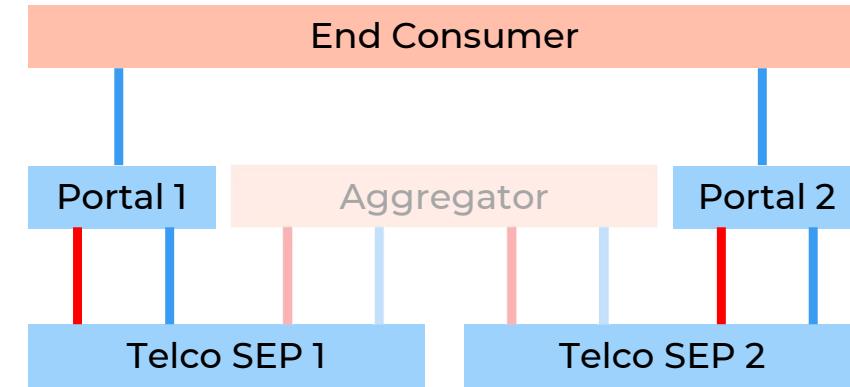

CAMARA API Distribution Options

Single-Operator Relationship

Multi-Operator Relationship

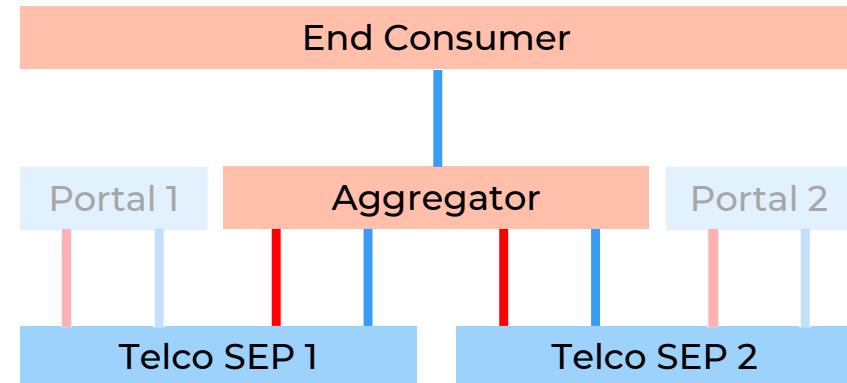

Blue lines =
CAMARA APIs

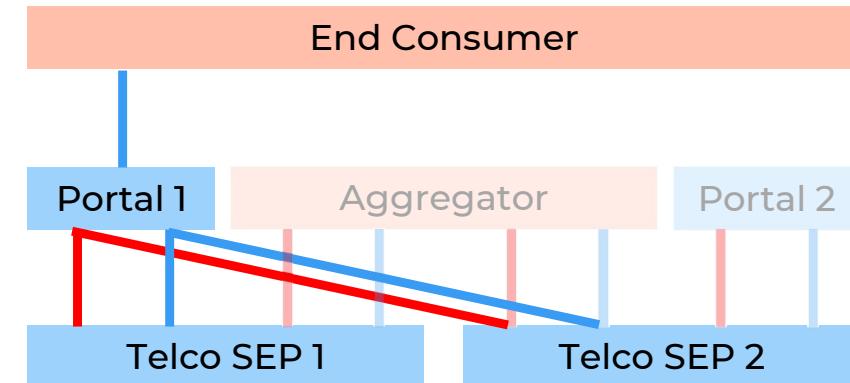

Red lines =
Operate APIs

SEP=
Service
Exposure
Platform

Operator Aggregation

Single-Operator “API Roaming”

What is different now in comparison
to former API exposure trials?

- **Simplicity** – Telco complexity is hidden behind simple, easy to use APIs
- **Demand driven** - Listening to customer's voice and demand
- **Availability** – Open APIs with great support of many operators on many platforms
- **Alignment** - With standardization bodies like TM Forum or ETSI-MEC
- **Sustainability** – We have the CEOs behind

CAMARA

Where we started...

CAMARA
THE TELCO GLOBAL API ALLIANCE

Launched at MWC Barcelona 2022

22 Launch Partners

Supported by GSMA and Linux Foundation

Simple idea to “standardize” developer facing APIs

Release Management Motivation and Benefits

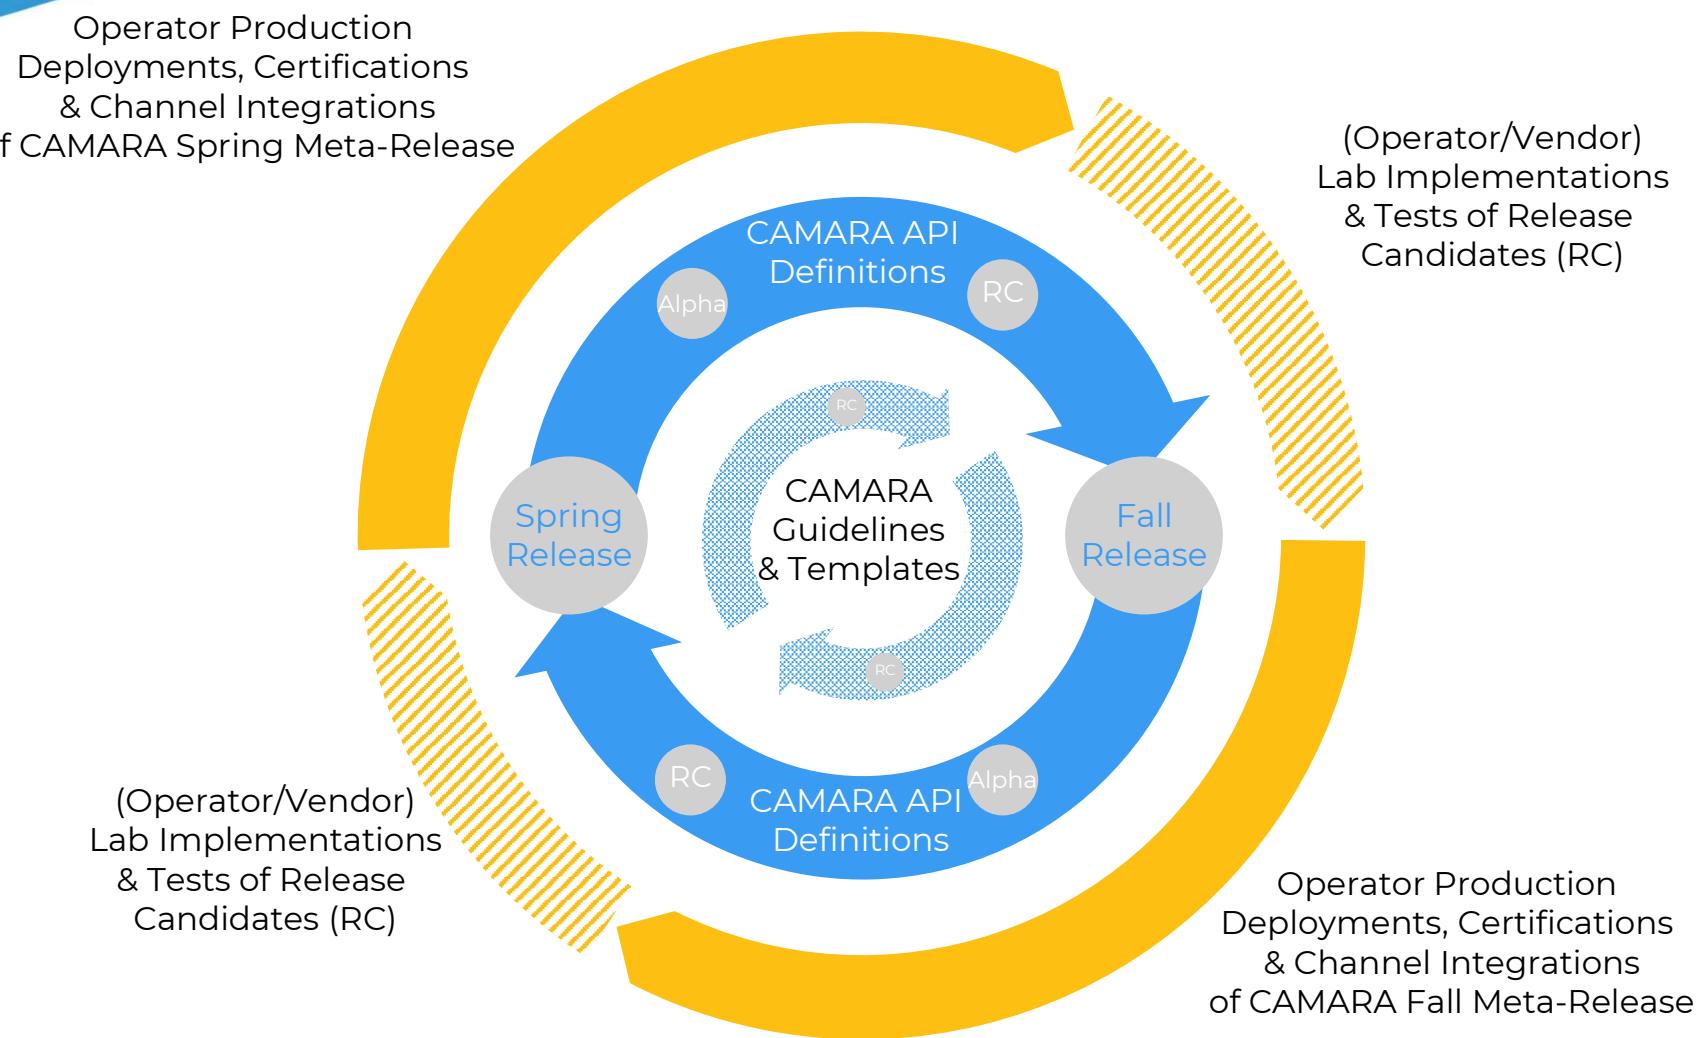

- A **CAMARA Meta-Release** combines a set of CAMARA API versions to a **consistent** release.
- There will be **two Meta-Releases per year** (in spring and fall).
 - Network operator can plan their implementations and deployments in production.
 - API customers can plan the integration in their platform and applications.
- All API versions within that release **fulfill defined quality criteria** and are **compliant to current CAMARA standards** like CAMARA Commonalities and Identity and Consent Management guidelines.
- **CAMARA Meta-Releases** ensure the
 - Availability of consistent API definitions (by use of guidelines, templates, and linting),
 - Quality of API definitions (by use of checklists, test definitions, and release management),
 - Stability of API definitions (clear criteria for stable versus “initial” API versions) and
 - Reliability of schedule and deliverables (with defined milestones and release candidates).
- **CAMARA Meta-Releases** provide the foundation for an API version management in production.

Release Management Release Cycle

- 2 releases each year
 - Fall Release ~ mid/end of September
 - Spring Release ~ mid/end of March
- Continuous and overlapping cycles
 - Update of CAMARA guidelines
 - Development and updates of API definitions in CAMARA
 - Lab implementations and production deployments at network operators
- Tests of API release candidates
 - Within operator (lab) implementations
 - Based on CAMARA test definitions
- Feedback in all phases
 - From(lab) implementations and deployments to CAMARA API definitions and guidelines
 - From API definition work to CAMARA guidelines

For details see <https://wiki.camaraproject.org/display/CAM/Meta-release+Process>

Release Management API List Fall24 release

CAMARA
THE TELCO GLOBAL API ALLIANCE

- **Stable APIs with v1.0.0 versions (previous API versions have been implemented by network operators):**
Location Verification, Number Verification, One-time Password SMS, Simple Edge Discovery, and SIM Swap
- **Further updated APIs which have been previously implemented by network operators:**
Carrier Billing, Device Reachability Status, Device Roaming Status, Home Devices QoD, KYC Fill-In, KYC Match, Location Retrieval, Quality-on-Demand (with qos-profiles)
- **Initial versions of new APIs, ready to be implemented by network operators:**
Call Forwarding Signal, Carrier Billing Refund, Connectivity Insights (with application profiles), Population Density Data, QoD Provisioning
- **New APIs to subscribe for event notifications in CloudEvents format:**
Connectivity Insights Subscriptions, Device Reachability Status Subscriptions, Device Roaming Status Subscriptions, Geofencing Subscriptions, SIM Swap Subscriptions

Beyond Meta-Release Fall 2024 – Upcoming APIs

Current CAMARA API Families (1)

CAMARA
THE TELCO GLOBAL API ALLIANCE

Blockchain Public Address Manage a blockchain public address associated to a phone number	Call Forwarding Signal Determine if a “call forwarding” service is enabled	Carrier Billing CheckOut Purchase, pay, and follow up on fulfilment of products	Click to Dial Establish web-based communication by clicking an object	Connectivity Insights Alerts the consumers if and when the QoS threshold has breached	Device Identifier Check the identity of the subscribers' device
Device Location Check the location of a device	Device Status Check the network connection and roaming status of a device	Device Swap Check if the MSISDN has had a change of device in the last 30 days	Edge Cloud Provide and manage network and compute resources for an application	Home Devices QoD Request prioritization of traffic on a specific device on the home network	Know Your Customer Allows service providers to validate user information with operators
Location Insights Give insights to the home area and latest location of a device	Network Access Management Manage fixed devices that reside at customer premises	Network Slice Booking Reserve, dynamically provision, query, dynamically delete a slice	Number Verification Allows users to verify the phone number of the connected device	OTP Validation To offer secure user authentication to service providers	Population Density Data Get dynamic population density data in a specific area for a future date & time

Current CAMARA API Families (2)

CAMARA
THE TELCO GLOBAL API ALLIANCE

Quality on Demand

Allows users to set mobile connection quality and get notifications

Region Device Count

Query the number of active devices in the specified area

Short Message Service

Send SMS to the destination address(es)

SIM Swap

Allows users to get information on SIM pairing changes

Simple Edge Discovery

Discover the closest edge cloud zone to a given device

Site to Cloud VPN

Create and configure site to cloud network service by one click

Verified Caller

Show certified information on the phone before a call is answered

Web RTC

Add real-time communication capabilities to applications

CAMARA Working Groups

API Backlog

Maintains the API Backlog for CAMARA

Commonalities

Guidelines and assets mandatory for all CAMARA Sub Projects

5G network capabilities

Introduction

Telco network capabilities are functions partly available already in 4G but new and much more powerful in the 5G network. These functions enable to get information out of the network but also to configure the network.

The on-demand, secure and controlled exposure of these capabilities pave the way for transforming operator networks into service enablement platforms, facilitating the application-to-network integration, which will be key to deliver enhanced and service-tailored customer experience in the 5G era.

5G network capabilities

Introduction

Reachability and Location of UEs
Identify (last known) location of drone

of UEs in geographic region
Traffic jam or Corona warning

of UEs in slice, network congestion
Adapt resolution for video transmission

Quality on Demand / Traffic influence
Enable augmented reality

Wake up UEs
Support low energy IoT devices

Block UEs in geographic region
Crisis management

Potential Business Use Cases

Sim Swap, etc.

Location APIs

Quality on Demand

Slicing APIs

Network APIs offer
the opportunity

- For customers to optimize their use cases and applications
- For operators to monetize their investment in 5G infrastructure

It's a win-win!

Benefit for developers to use CAMARA APIs

- 1** Reduces friction for developers to access network information across telcos globally.
- 2** Increases usage and value of telco networks by providing easy access to network capabilities.
- 3** Enables developers to create new applications or improve existing ones with access to these capabilities.

Additional revenue on existing assets, leveraging SDN and NFV capabilities

Developers Getting Started with CAMARA APIs

The screenshot shows the CAMARA website's navigation bar with a red arrow pointing to the "Sub Projects A-H" dropdown menu. The menu lists various telco-related sub-projects. The background of the page features a blue network-like graphic and a large white text overlay that reads: "APIs enable seamless access to Telco network capabilities".

Quality on Demand

Scope

- Service APIs for "Quality on Demand" (see APIBacklog.md)
- It provides the customer with the ability to:
 - set quality for access network connections (e.g. mobile device connection or fixed access between a home gateway and the service providers gateway router)
 - get notification if network cannot fulfill
- Describe, develop, document and test the APIs (with 1-2 Service Providers)
- Started: October 2021
- Location: virtually

Meetings

- Meetings are held virtually: [Meeting registration / Join](#)
- Schedule: bi-weekly, Friday, 2 PM CET/CEST (13:00 UTC, 12:00 UTC during European DST). For date/time of next meeting see previous [meeting minutes](#).

Results and Status

- Note: Please be aware that the project will have frequent updates to the main branch. There are no compatibility guarantees associated with code in any branch, including main, until a new release is created. For example, changes may be reverted before a release is created. **For best results, use the latest available release.**
- The latest available and released version 0.10.0 is available within the [release-0.10.0 branch](#)

- API definition v0.10.0 with inline documentation:
 - [View it on ReDoc](#)
 - [View it on Swagger Editor](#)
 - OpenAPI YAML spec file

- The previous released version v0.9.0 is available within the [release-0.9.0 branch](#)
- For changes between v0.10.0 and v0.9.0 see the [CHANGELOG.md](#)
- Provider implementations (PI) are available within separate repositories (partly for previous releases):

- [QualityOnDemand_PI1](#) by Deutsche Telekom
- [QualityOnDemand_PI2](#) by Orange
- [QualityOnDemand_PI3](#) by Spry Fox Networks

Benefit for developers to work in CAMARA

As a typical Open Source Project **CAMARA is driven by contribution!**

People who contribute define priorities and drive the direction.

Working in CAMARA on API definitions, API documentations and API code (transformation functions) enables to

- **Bring in own demand** and contribute a solution
- **Influence the definition** of new APIs and API versions
- Ensure that own requirements are considered
- **Provide code which can be used globally**
- **Learn** about CAMARA, Open Gateway and the Network API ecosystem
- **Get deep knowledge about the APIs**
- **Become maintainer and TSC member** to influence technical decisions in CAMARA

Joining CAMARA as Developer

To join the CAMARA mailing list send an (empty) email to all+subscribe@lists.camaraproject.org.

A screenshot of the CAMARA web interface. The top navigation bar has "CAMARA" on the left and "Your Groups ▾" on the right. The main content area shows a breadcrumb path: Home / Members / markus / markus.kuemmerle@telekom.de. A "Mod" button is also present. On the left, there's a sidebar with "Home Owner" (highlighted), "Subscription", "Admin", "Pending", "Members" (highlighted), and "Activity". The main content area shows "User Details" and an "Email Address" field containing "markus.kuemmerle@telekom.de". A note at the bottom states: "Note: Changing this email address changes the email address for this person's account, affecting all of their other subscriptions."

QualityOnDemand

Repository to describe, develop, document and test the QualityOnDemand API family

Scope

- Service APIs for "Quality on Demand" (see APIBacklog.md)
- It provides the customer with the ability to:
 - set quality for a flow within an access network connections (e.g. mobile device connection or fixed access between a home gateway and the service providers gateway router)
 - Session mode, for a specific duration
 - Provision mode, indefinitely for each time the device connects to the same access network
 - get notification if network cannot fulfill
- Describe, develop, document and test the APIs (with 1-2 Service Providers)
- Started: October 2021
- Location: virtually

Meetings

- meetings are held virtually: [Meeting registration / Join](#)
- Schedule: bi-weekly, Friday, 2 PM CET/CEST (13:00 UTC, 12:00 UTC during European DST). For date/time of next meeting see previous [meeting minutes](#).

Status and released versions

- Note: Please be aware that the project will have frequent updates to the main branch. There are no compatibility guarantees associated with code in any branch, including main, until a new release is created. For example, changes may be reverted before a release is created. For best results, use the latest available release.
- The latest available and released version 0.10.1 is available [here](#)
 - API definition v0.10.1 with inline documentation:
 - [View it on ReDoc](#)
 - [View it on Swagger Editor](#)
 - OpenAPI [YAML spec file](#)
 - The previous released version v0.9.0 is available within the [release-0.9.0 branch](#)
 - For changes between v0.10.0 and v0.9.0 see the [CHANGELOG.md](#)
 - Provider implementations (PI) are available within separate repositories (partly for previous releases):
 - [QualityOnDemand_PI1](#) by Deutsche Telekom
 - [QualityOnDemand_PI2](#) by Orange
 - [QualityOnDemand_PI3](#) by Spry Fox Networks

Contributing to CAMARA

In the Project the “Fork and pull model” is used. Changes and contributions to CAMARA shall follow this process:

<https://github.com/camaraproject/Governance/blob/main/ProjectStructureAndRoles.md>

Benefit for operators to implement CAMARA APIs in their networks

Operators have made high investments in

- Spectrum licences
- Infrastructure (cell towers, fibre)

Operators haven't been successful in

- Increasing customer prices for connectivity contracts

CAMARA APIs open a possibility

- To monetize the high investments
- To improve customer experience
- For market positioning

What have operators to do to implement Network APIs?

CAMARA
THE TELCO GLOBAL API ALLIANCE

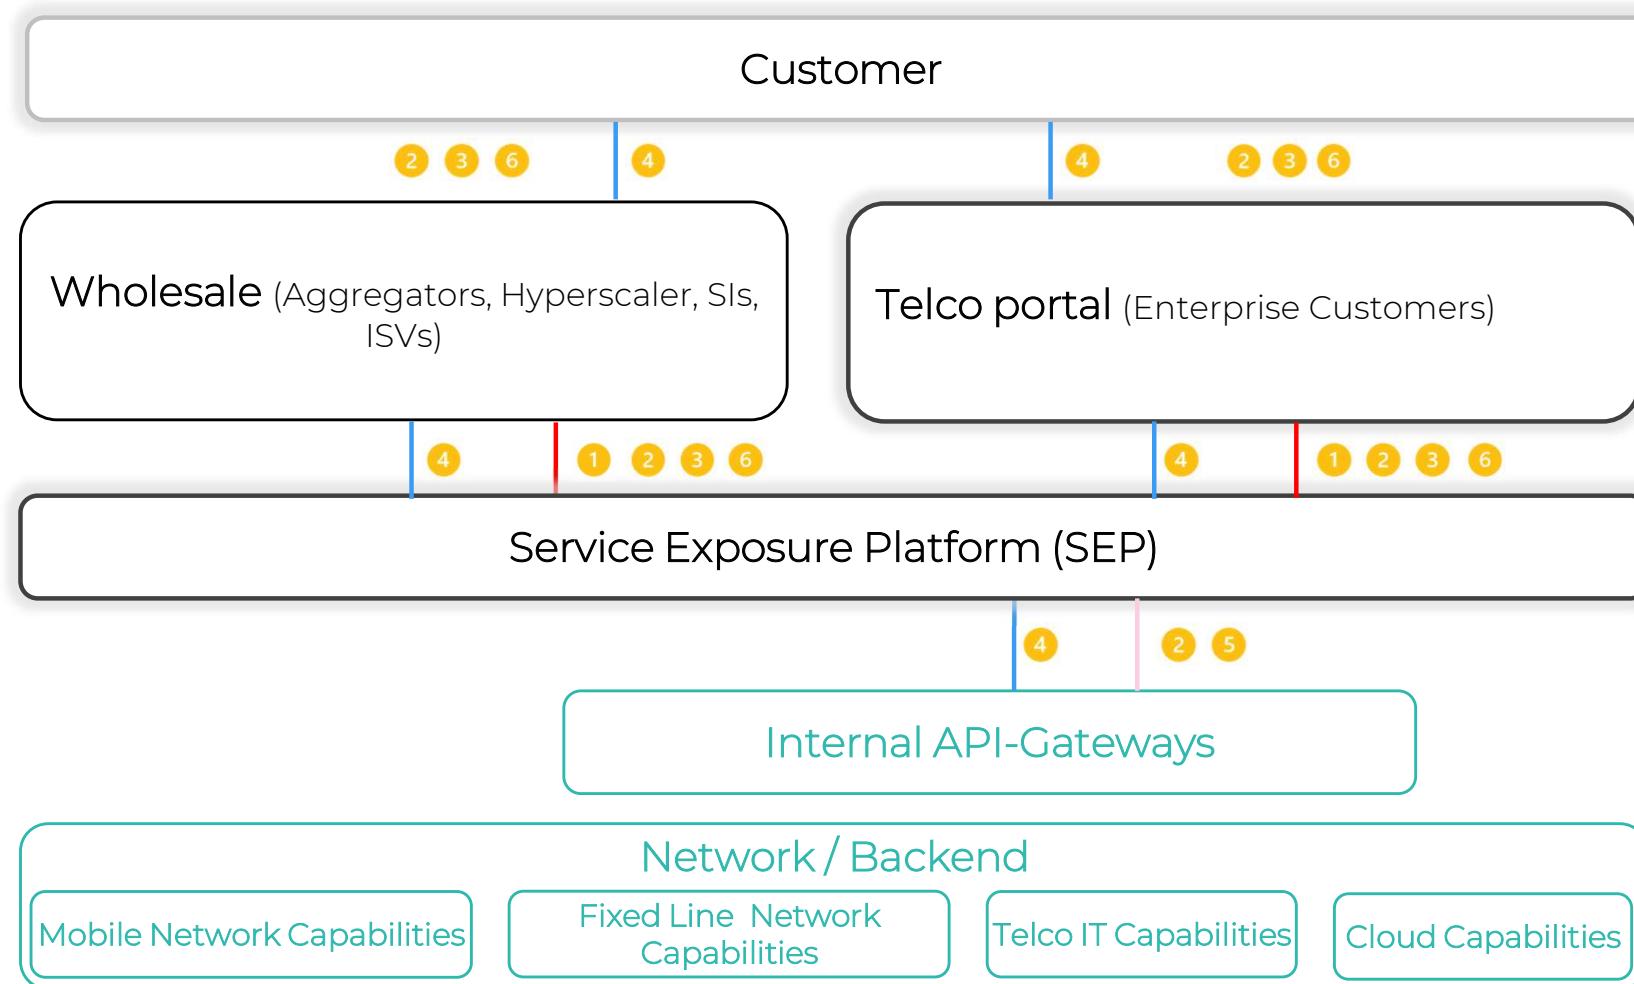

- Develop APIs and products based on the network capabilities
- Implement an exposure infrastructure
- Define commercial products
- Sell it

CAMARA
THE TELCO GLOBAL API ALLIANCE

GSMATM
Open Gateway

tmforum

What have operators to do to implement Network APIs?

Possible API workflows

1. Catalog published from SEP to portals
2. Customer onboarding to SEP
3. Customer orders API, SEP sends credentials to access API
4. If necessary SEP requests user consent for API. Capacity management is done.
Customer uses API. SEP performs metering (wholesale) / metering and rating (retail).
5. SEP initiates billing for wholesale and retail
6. Customer offboarding

Service API

IT API

Operate API

Benefit for operators to work in CAMARA

CAMARA
THE TELCO GLOBAL API ALLIANCE

Collaborative Innovation

- Industry Collaboration
- Standardization: contribute to development of industry standards, ensuring interoperability and consistency across networks and services
- Bring in your requirements!

Networking and Partnerships

- Access to a growing global network of industry leaders
- Technological Advancements
- Knowledge Exchange

Shared Resources

- Collaborative projects often lead to cost savings through shared resources and reduced duplication of efforts
- Benefit from the collective research efforts

Benefit for operators
to work in CAMARA

Why Join CAMARA as a sponsor /member?

Seat on the Governing
Board to influence CAMARA
strategy

Commitment to open API
development

Discounts on Linux
Foundation events &
programs

Help ensure the Project
continues to provide needed
governance & infrastructure

Platform to showcase
thought leadership

Operators Getting Started with CAMARA

Individuals and organizations from API customers (e.g. enterprises and startups), aggregators, cloud operators, telco operators, network equipment vendors, system integrators, and software vendors are welcome to join CAMARA.

For organizations:

- If you are interested to show your logo on the CAMARA website as "**Participating Organization**" send a .SVG version of it to adm@lists.camaraproject.org. Participation is free, without any fees or obligations.
- If you would like to become a **CAMARA sponsor** please don't hesitate to use the [enrollment link](#). The cost is depending on the kind of membership and the number of employees.
- Associate Members of The Linux Foundation can also join as "**Associating organization**" for free, without any fees or obligations.

CAMARA

Where are we going next...

CAMARA
THE TELCO GLOBAL API ALLIANCE

1

Additional APIs and roadmap sync across CSPs,
Aggregators and Hyperscalers

2

API lifecycle management consistency,
Documentation of API versioning and availability globally

3

Drive API Adoption (customers/developers and operators)

CAMARA Contacts

CAMARA
THE TELCO GLOBAL API ALLIANCE

Individuals and organizations from API customers (e.g. enterprises and startups), aggregators, cloud operators, telco operators, network equipment vendors, system integrators, and software vendors are welcome to join CAMARA.

To access CAMARA technical resources like API definitions, API specifications or API code just visit the [CAMARA GitHub](#). All resources are reachable without any prerequisite. To create issues and start contributing to CAMARA you need a free GitHub account without any further prerequisite. This participation is free, without any fees or obligation to work.

If you are interested to be included in the CAMARA communication, please subscribe to all+subscribe@lists.camaraproject.org. You may unsubscribe from CAMARA and these communications at any time. Participation is free.

If you are interested to show your logo on the CAMARA website as “Participating Organization” you can send it to adm@lists.camaraproject.org. Participation is also free.

If you would like to join as CAMARA sponsor or associating organization, please don't hesitate to use the enrollment link <https://enrollment.lfx.linuxfoundation.org/?project=camarafund>. Cost is depending on the kind of membership and the number of employees.
